

The image shows the Attendant Prodigy Bladder Scanner, a medical device used for non-invasive bladder volume measurement. It features a large, tilted color LCD screen at the top. The screen is divided into two main sections: the left section displays a large blue number '171' with 'ml' underneath it, and the right section displays a smaller blue number '166' with 'ml' underneath it, next to a green circular graphic on a blue grid. Below the screen is a black, ergonomic handle with a trigger. The device is mounted on a silver-colored metal stand with a horizontal arm. The background is a light blue with a pattern of larger, faint blue circles.

Introducing the Revolutionary Attendant® Prodigy™ Bladder Scanner

Simpler. Faster. Smarter.

- ➔ Automatic bladder detection
- ➔ Save time from setup to scan to cleanup
- ➔ Wireless probe
- ➔ Accurate results in fewer scans
- ➔ Improved accuracy and uptime with self-calibration
- ➔ Elegantly simple design minimizes training
- ➔ Limited 3-year warranty, including accidental probe drops

180-Degree Viewing Angle

Eight individual transducers provide a detailed, wide-angled view of pelvis

Advanced Features Help You Streamline Workflow and Provide Maximum ROI

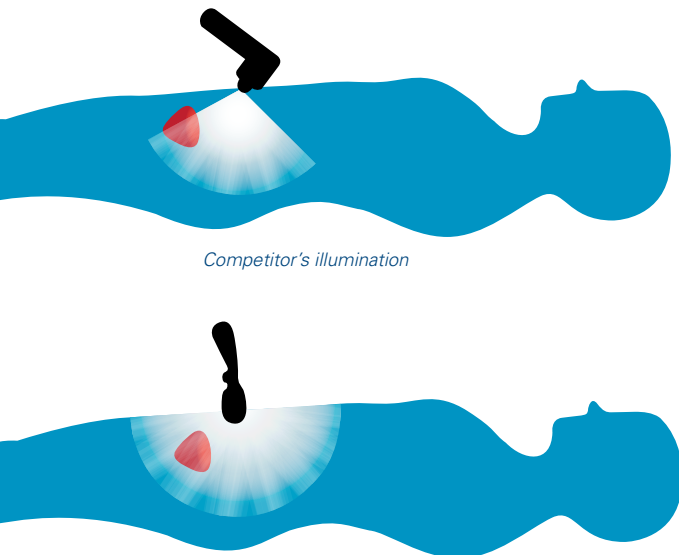

Automatic Bladder Detection

The Prodigy Bladder Scanner's self-aiming ability automatically detects and measures bladder without user manipulation. Every other scanner on the market today requires the user to manually aim the probe and none are self-aiming. Simply place in area of the bladder and scan!

See Fig. 1.1

Wireless Probe Technology

Other bladder scanner cords yank, stretch, bend or snap. The Prodigy Bladder Scanner's wireless probe is completely independent of the base station for easier disinfecting. Users can also leave the console outside the resident's room and only take the probe into the room for scanning, making it less susceptible to cross-contamination.

Competitor's illumination

Fig 1.1 Prodigy Bladder Scanner illumination

- ➔ No connectors that are prone to mechanical failure
- ➔ Bluetooth connectivity – you never need to touch the console
- ➔ Probe is ready when you are (no “on/off” button)
- ➔ Rugged construction protects main internal components from shock and vibration
- ➔ Medical-grade polymer probe handle is extremely impact- and chemical-resistant

Automatic Gender/Patient Mode

No setup is required because the Prodigy Bladder Scanner auto-detects key patient information. Other scanners require the user to enter resident information, such as male or female, adult or pediatric, female with or without uterus, etc.

Motion Immunity

Most competing scanners use a single transducer to measure the bladder, meaning the user has to either hold the probe very still or manually scan the bladder. With eight transducers in the Prodigy Bladder Scanner, the user does not need to hold the probe in a perfect position to get an accurate reading.

Automated Internal Diagnostics

Other scanners typically require annual calibration or periodic system testing to ensure proper operation and prevent erroneous scans, which can be costly and lead to lost production. The Prodigy Bladder Scanner saves you both time and money by performing a series of self-tests and adjustments every time you use it.

Intuitive Interface

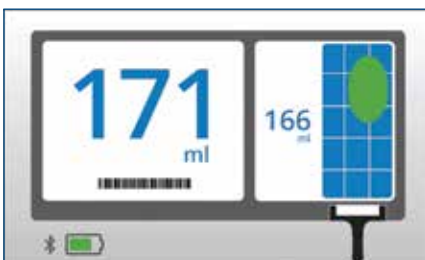

Enjoy clean and simple data displays with the largest and most accurate reading always displayed on the left. Crosshair confirmation of accurate reading is displayed on the right.

Innovative LiFePO4 Battery

Long-lasting LiFePO4 battery, integrated into the console, powers the bladder scanner and charges the probe while docked. LiFePO4 battery technology is lower voltage than common lithium-ion and is highly resistant to stress and breakdown from over-charging.

3-Year Warranty

The Prodigy Bladder Scanner comes with a standard 3-year limited warranty on the console and probe (including accidental probe drops).

Clinical Research & Feedback

A recent study* found the technology in the new Prodigy Bladder Scanner outperformed the leading national brand in so many ways.

due to improved accuracy and ease of use in addition to clinical benefits

Innovative technological features preferred compared to other models

More than half of caregivers prefer a device that eliminates the need to aim

prefer a wireless probe – the Prodigy Bladder Scanner can communicate more than 30 feet from the display

Specifications

Accuracy	± (12.5% + 12.5 mL)
Limited Warranty	3 year limited warranty
Automatic Patient Mode	Yes
Automatic Bladder Location	Yes
Immune to Motion	Yes
Number of Transducers	8
Field of View	180 Degrees
Wireless	Yes
Battery	Internal
Battery Type	LiFePO4
Automatic Calibration	Yes
Included:	<ul style="list-style-type: none"> • Skills checklist to help you create on-site staff training • Targeted nursing and CNA training resources • Online videos with step-by-step instructions for setup, proper scanning technique and troubleshooting • Cleaning and servicing guide to help with ongoing equipment maintenance
