PADDLE ASSY

This technical diagram illustrates the exploded view of a Paddle Assy. The assembly consists of a main frame (13) with a curved top and a vertical support (2). A paddle blade (1) is attached to the end of the frame via a hinge mechanism (9, 10, 12, 14). The hinge includes a pivot pin (8) and a spring (16). The frame is secured with various bolts (7, 11, 16, 17, 19, 21, 22) and washers (4, 6, 20, 23). A small component (20) is also shown near the base of the frame. The diagram uses numbered callouts (1-23) to identify each part and its assembly location.

BRUSH SELECTOR GUIDE-CYLINDRICAL

We provide brushes and pad holders that will give you the best possible performance between machine and floor. Following are descriptions of the materials and their applications.

Soft Nylon Brush:	Least aggressive brush available. Used on soft-finish floors where a more aggressive brush would leave scratch marks, or in applications requiring very light cleaning.
Hard Nylon Brush:	Cleaning action similar to polypropylene. More durable and wear-resistant than polypropylene.
Polypropylene Brush:	Standard for carpet only models. Low cost, yet effective cleaning for carpeted areas and many common floor surfaces.
180 Grit Brush:	Least aggressive grit brush. Used for daily cleaning of hard-finished floors.
80 Grit Brush:	Medium aggressive grit brush. Good all-around brush for medium to heavy buildup removal. Can also be used for general stripping operations.
46 Grit Brush:	Most aggressive grit brush. Used primarily to clean heavy buildup on concrete floors in factories, or for heavy stripping of finish.
Multi-Surface:	Standard for multi-surface models. Anti-microbial brush designed for all flooring surfaces.
