Panacea® Pro Cushions

Help residents stay comfortably seated with the right cushion for their unique needs

	Flat/Zero Elevation		Wedge	Anti-Thrust	Pommel	
Imagery						
Shape	Same thickness across the entire surface		Thicker in the front than in the back	1" shelf at midline	Center Pommel	
Use Case	For residents who need added comfort, support, or basic pressure management with minimal positioning		Provides support, comfort, and pressure reduction for active residents who tend to thrust or slide forward. They are an excellent match with reclining wheelchairs to distribute pressure	Reduces sacral sitting or hip rotation and prevents forward sliding.	Abduct and properly align legs which promotes better posture. A common term for incorrectly positioned legs is "wind-swept legs." This can cause the hips to rotate, the spine to twist and the head to drop, creating many long-term health problems.
