- Rapid Agonist Antagonist Sequencing (RAAS) is used for neuromuscular re-education and treatment of muscle disuse atrophy; designed to mimic the typical muscle-firing patterns of a healthy individual during functional movement or activity
- Full-color touchscreen with menu-driven interface intuitively groups and displays clinical protocols, guiding clinicians step by step to ensure ideal therapeutic treatment
- Six clinical electrotherapy waveforms: Interferential/Premodulated, TENS (Symmetrical Biphasic & Asymmetrical Biphasic), NMS, Russian, High Volt and Microcurrent
- Manual operation allows for user-defined protocols
- Favorites feature allows storage of up to 99 custom programs for future use
- EX4 is an advanced four-channel multifunctional electrotherapy system; CX4 is a combination 4-channel electrotherapy plus ultrasound system with 1 and 3 MHz ultrasound frequencies, and Pulsed and Continuous Modes
- 3-year limited warranty
